txp

Smarter Operations. Stronger Output. More Profit.

Manufacturing

End-to-End Supply Chain Visibility

Gain a unified view of your entire supply chain. From raw materials to finished goods - enabling faster, data-driven decisions and reduced bottlenecks.

AI-Driven Demand Forecasting & Production Planning

Leverage AI to predict customer demand with precision and align production schedules for optimal resource use and inventory levels.

Predictive Maintenance & Downtime Reduction

Use real-time machine data and AI models to anticipate equipment failures before they happen, minimising unplanned downtime.

Quality Control with Real-Time Data

Continuously monitor production quality using real-time analytics to quickly identify and correct defects or process deviations.

No more siloed data. No more guesswork. Just faster insights, smarter decisions, and measurable impact - all within the Microsoft ecosystem.
